AMENDMENT NO. 3

PROJECT NO. DACW51-01-B-0002

TECHNICAL REQUIREMENTS INSTRUCTIONS TO OFFERORS

MAINTENANCE DREDGING AND DISPOSITION OF DREDGED MATERIAL FROM ARTHUR KILL
REACH OF THE NEW YORK AND NEW JERSEY CHANNELS, FEDERAL NAVIGATION CHANNEL

TO PROSPECTIVE BIDDERS:

The following information is hereby made to the subject TECHNICAL
REQUIREMENTS INSTRUCTIONS TO OFFERORS for the Maintenance Dredging of the
Arthur Kill Reach of the New York and New Jersey Channels.

1. Section 00100, Part IV. INFORMATION FOR OFFERORS, the following questions
were received and are answered below:

*Question 1: Because the contract is broken into a base contract and multiple
options, is the contractor required to sample the option areas in addition to
the base quantity?*

Answer: The offeror is required to demonstrate that all the proposed dredge
material, including options, will be acceptable to the facility where the
material will be disposed of. The offeror is required to meet the
requirements of the regulatory authority(ies) having jurisdiction over the
disposal facility that he selects. The offeror is required to characterize
the dredge material to obtain all required regulatory approvals for the
disposal area.

*Question 2: Surveys indicating the specific shoals contemplated under this
contract have not been provided. How is the contractor to determine the base
quantity from the options and establish a sampling plan that covers the
required area?*

Answer: The Offeror's sampling plan is not determined by the
structure of the contract. It is determined by the requirements
of the regulatory agency and disposal facility where to the

dredged material is to be processed and /or placed. The sampling plan is that which is needed to characterize all of the proposed dredge material, base quantity and options (see answer to question 1).

To be considered a technically acceptable proposal under step 1 of this solicitation process the contractor shall "Provide proof of approval by the appropriate regulatory agencies of the material for this contract for compatibility with the proposed Disposal Site, with their concurrence for material placement there. Include required sampling and testing results." (Reference Technical Requirements Instructions to Offerors, Maintenance Dredging and Disposition of Dredged Material From Arthur Kill Reach of the New York and New Jersey Channels, Federal Navigation Channel, page 6. Section V. Required Submittals, paragraph 2. (C)).

Page 8 of the Technical Requirements Instructions to Offerors, Maintenance Dredging and Disposition of Dredged Material From Arthur Kill Reach of the New York and New Jersey Channels, Federal Navigation Channel, Section V. Required Submittals, paragraph 6. Additional Guidance on Submittals, paragraph (A) Permits states that, "The dredged material will be required to meet all federal, state and local criteria required for the site selected. All necessary permits required for the dredged material placement will be provided by the Offeror at the time proposals are submitted."

The authorized channel depth for the Arthur Kill Channel is 35 feet. The shoals identified under this contract have been outlined by a 35 foot contour line on the condition survey provided in the solicitation. The specific contract dredge areas of base and options shall be defined in the Plans and Specifications that will be provided to those offerors considered technically acceptable in Step One.
